

ZERRAN APS®
Advanced Professional Services
100% Vegan

Bond Amplifier No. 1
Bond Completion No. 2
Hair Redemption® No. 3

Zerran Advanced Professional Services System has been formulated with exclusive botanicals by our experienced research team to maximize your chemical service results and save time in your salon. Our unique formulae are designed to work with the chemistry of any brand of color or lightener, perm or relaxer that you use. As part of our professional Zerran product line, they are 100% vegan, free of sulfates, fume-producing aldehydes and other harmful ingredients. Zerran never tests on animals.

Bond Amplifier No. 1

What is it?

Bond Amplifier No. 1 accelerates the speed and depth of your chemical services, while infusing each strand's bonds with ultra-refined vegan proteins for strength and integrity. It also serves to equalize porosity over the strand, making your professional services more predictable and even. Vegan proteins help shield the hair from overprocessing during alkaline services.

How to use Bond Amplifier No. 1 with lighteners, including powder and cream bleach for any application method:

If you use:	Your developer	Add Bond Amplifier No. 1
1/2 oz. bleach powder or cream	Any volume, mix to texture choice	1/8 oz./4 ml
1 oz. bleach powder or cream	Any volume, mix to texture choice	1/4 oz. /8 ml
1-1/2 oz. bleach powder or cream	Any volume, mix to texture choice	1/4 oz. /8 ml
2 oz. bleach powder or cream	Any volume, mix to texture choice	1/2 oz /15 ml

Bond Amplifier No. 1 accelerates your processing speed and depth, so **check for desired lift level early, and check often**. For this same reason, be extra cautious when adding heat to your lift process. Because Bond Amplifier No. 1 accelerates without diluting, **you do not need to change your developer strength**. This means that 20 volume developer gives you 20 volume results, only richer, more vibrant, and longer lasting.

How to use Bond Amplifier No. 1 with color, including permanent, semi- and demi-permanent plus temporary and high lift:

Mix your color with the developer level of your choice, and add 1/8 oz. Bond Amplifier No. 1. Mix well and apply.

Bond Amplifier No. 1 accelerates your processing speed and pigment deposit depth while reinforcing hair strength and maintaining integrity. Use caution when adding heat to high lift colors, because timing may be shorter. **Check for desired lift level early, and check often. Do not change your customary developer strength.**

How to use Bond Amplifier No. 1 with perms and relaxers:

Add 1/8 oz. Bond Amplifier No. 1 to your perm solution bottle and mix before continuing with standard application. When using cream relaxers, for every ounce of relaxer used, add 1/8 oz. Bond Amplifier No. 1 and proceed with your standard application.

Bond Completion No. 2

What is it?

Bond Completion No. 2 is used to seal each strand, realign the cuticle and finalize neutralization of all your chemical services, all while infusing each strand's bonds with ultra-refined vegan proteins for strength and integrity. Bond Completion No. 2 also dramatically reduces odor when used with perms.

How to use Bond Completion No. 2 with lighteners or color:

After you have achieved your desired results and completed the final rinse, apply a liberal amount of Bond Completion No. 2 to damp hair and finger-smooth gently through the hair. Leave on for 10 minutes without added heat to seal in your results and finalize neutralization before rinsing and styling.

How to use Bond Completion No. 2 with perms or relaxers:

After final neutralization, remove rods or boards, and apply a liberal amount of Bond Completion No. 2 to damp hair and finger-smooth gently through the hair. Leave on for 10 minutes without added heat to seal in your results and finalize neutralization before rinsing and styling.

Hair Redemption No. 3

What is it?

Hair Redemption No. 3 is a hair repair and bond maintenance treatment to maximize hair integrity, strength and shine between chemical services.

It is not a conditioner, but a reconstruction treatment to reverse daily damage from heat, chemicals and UV/environmental exposure. Ultra-refined vegan proteins and soothing botanicals maintain maximal hair integrity, and this treatment can be performed as often as needed at home without buildup or brittleness.

Zerran APS Bond Reconstruction Professional Service:

We recommend using a clarifying shampoo if needed for heavy buildup, and gently blot hair with a towel. Otherwise, you may begin with dry hair.

- Mix 1/2 oz./ 15 ml Bond Amplifier No. 1 with 3 oz./90 ml water in an applicator bottle. Shake gently to mix.
- Apply to hair, saturating well and comb through gently for even distribution. Leave on for 5-10 minutes.
- Apply a generous amount of Bond Completion No. 2 directly over the Bond Amplifier No. 1 and comb through. Leave on for 10-15 minutes before rinsing and styling.

Use your discretion regarding how many reconstructive treatments are needed before proceeding with a chemical service. Strand testing is always recommended.

How can Zerran APS® add to my salon bottom line?

APS can be used as a **chemical service upgrade** for an additional charge, since you are focusing on improving service results and client satisfaction, all while improving the integrity of their hair.

Zerran APS Bond Reconstruction is an excellent **stand-alone professional service** to improve hair strength and integrity.

Please consider product cost, your time, your clientele and your overhead when pricing these professional services. After all, you are now providing a unique service that is levels above your competition.

Hair Redemption® No. 3 is the recommended take-home/ retail product for maximum hair health between salon visits. Please remind your client that Hair Redemption No. 3 is for hair reconstruction, and is not a substitute for a conditioner.
